Cargo: Condensate Filtration Skid
Dimension: L11.00 m x W10.00 m x H7.00 m
Weight: 270 ton

Megalift was appointed as the forwarder to undertake the project management and coordination of the cargo known as Condensate Filtration Skid. Due to some constraints from the port, we had to perform a sideway loadout method, which is different from the normal Mediterranean RORO procedure. It posed a higher degree of risks in the loss of the barge's sideway heeling stability. Along with an offset in center of gravity (COG) due to offshore's lifting compliance, it was mandatory to execute a 100% ballasting which is more complicated and time-consuming.

The entire movement from transporting out of the fabrication yard to sailing off the barge took us five full days, after months of prior preparation, meetings, fabrication and installation.

We are really happy rendering our service to our client who is performing the fabrication of this Condensate Filtration Skid for the very first time. It is also our pleasure to be part of the project as this particular filtration system is the latest technology to be newly integrated in the offshore platform.

The upgrade of an oil and gas refinery project in Port Dickson has begun with importation of various cargoes. We're glad that Megalift has been appointed as the logistics partner.

The investment is key as an advancement move to produce better quality diesel to meet the Malaysian government's environmental standards.

THE 15TH SOLAR PROJECT SINCE 2017

If you've been following our newsletters, you'd probably know solar is one of the major industries that we largely specialise in. How can we not when it is a sustainable green energy that our country is leveraging on. We are glad to say we have recently embarked on our 15th solar project in Malaysia.

For this project, we are handling a total of more than 600 containers in three different locations, passing through three different ports in Malaysia.

Air Freight

Apart from heavy transport, barging and heavy lifting, Megalift also provides air freight services across the world. Air freight is your prudent mode of shipping if you're moving high value and urgent cargoes. Our air freight team is well-versed with various industrial equipment of any sizes be it for oil and gas, power and other industries. We also handle regular shipments of dangerous cargoes, F & B products and other consume goods.

Powergen Asia 2019 - MITEC, Kuala Lumpur

PROJECT

We participated in the Asia's Premier Power Generation event, Powergen Asia 2019 in MITEC, Kuala Lumpur last September. It was great meeting both new and familiar faces and we definitely strengthened our name in the realm of power and energy in Malaysia and beyond. See you in Powergen Jakarta next year!
