HAPPY NEW YEAR 2022

DELIVERING POSSIBILITIES

Cargo: SGT700 Gas Turbine
Dimension: L13.54 m x W5.34 m x H4.01 m
Weight: 86 ton

From Siemens Norrkoping to Port Klang by RORO vessel, the SGT700 Gas Turbine was imported for the set-up of a co-generation plant in Kuala Langat. The power generation will support the function of a recycling paper mill. Apart from the Gas Turbine, we are also handling the import of other cargoes including modules, generators and accessories. Check out the transportation video in YouTube: <https://youtu.be/qtqbfB7JWy4>

Cargo: Transformer
Dimension: L6.10 m x W5.20 m x H5.30 m
Weight: 265 ton

Megalift was the Turnkey Project Logistics Solutions provider for TB 1,2,3 (2005-2006) and TB 4 (2014) and last month we were back in Tanjung Bin with a new Transformer. We arranged the freighting of this 265-ton cargo from India to Jurong Port, Singapore. In Jurong Port, we performed a double banking to discharge the cargo onto a barge from the vessel. The barge was then sailed to Tanjung Bin power plant's inhouse jetty for us to roll it off to transport the Transformer to its final delivery point. This was done considering inland transport was not feasible. We also performed the jacking and skidding to move the Transformer onto its foundation.

Megalift is truly honoured to be presented with Cenviro's Sdn Bhd First ever HSSE Focus Recognition Award. We are the only recipient of this award this round. The award was presented in conjunction with their HSSE Contractor Dialogue. While we take pride in the HSSE Focus Recognition, the accolade also serves as a reminder that safety is a matter of utmost importance in everything, especially in what we do. Thank you again to Cenviro and we wish to continue bringing positive contributions to the success of your organization.

Machine 7804 Train Set for KTMB

Cargo: Machine 7084 Train Set
Dimension: L21.26 m x W2.91 m x H4.03 m
Weight: 59 ton

Received the Machine Train Set in Port Klang that was shipped via RORO vessel from Germany. We then transported to Shah Alam and offloaded using two sets of mobile cranes.

Our new open yard in Port Klang is currently being used to store Tunnel Boring Machine parts that were previously used in the construction of LRT 3. There are a total of 21 packages from the largest A, B and C Rings as well as the gantries, screw conveyor, etc. Our spacious yard that is gated and guarded is very suitable for the storage of oversized cargoes.

Cargo: TBM Parts

Dimension:

L4.80 m x W4.80 m x H3.80 m

Weight: 162 ton

NEW WAREHOUSE FACILITIES

350,000 square feet | in Port Klang | Ready in April 2022
